

Strainers and Sight Glasses

Angle Type Strainers and Accessories

As one of the most important system components, AWH strainers protect plants and production machines from mechanical damage, keep undesirable particles away from your product and help to prevent production downtimes. AWH strainers are easy to install, have minimal space requirements, and can be used flexibly due to the large number of different filter inserts.

Technical Parameter

Material:	in contact with the product: 1.4301 (304) /1.4307 (304L), 1.4404 (316L) not in contact with the product: 1.4301 (304) /1.4307 (304L) strainer: 1.4404 (316L)
Surface:	inside: $Ra \leq 0.8 \mu m$ (strainer and welding seam higher) outside: electro polished
Sealing:	grooved ring, seal ring: EPDM (other materials on request)
Compressive strength:	nominal pressure DN25 - DN100: PN10 nominal pressure DN125 - DN150: PN6
Connections:	standard: welding ends DIN EN 10357 alternative: male ends DIN 11851/SMS alternative: liner ends DIN 11851 alternative: clamp ends DIN 32676 (other variants on request)

Features

1. The gap width and perforation can be easily adjusted to specific requirements by replacing the strainer insert.
2. To carry out maintenance and cleaning work, simply loosen the nut. Strainer inserts can then be pulled out without any problems.
3. During disassembly of the strainer insert, the gap between the tube and the casing is automatically cleaned by the scraper ring.
The slotted tube used has the same dimensions, but features a larger strainer area than conventional perforated sheets.
4. Direction of flow is from the outside to the inside.
5. Determination of the nominal pressure is made on the basis of fluids from Group 1 and for gases from Group 2.
6. Cost-effective production was another important factor in designing this product. Compare us to our competitors. Our prices will impress you.

Not all versions could be included in this catalogue.

Further strainer inserts are available.

We will be happy to tailor our angle type strainer to meet your needs. For example, with heating.

Dirt Traps and Accessories

AWH dirt traps protect your product and plant components, pumps, heat exchangers etc., from foreign objects that can cause malfunctions. Our dirt traps are Y-shaped (Y filter). The direction of flow is always from the inside to the outside. The trap should be installed so that the filter insert is removed from below. Its streamlined shape ensures reliable processes in a simple and cost-effective way.

We offer gap filters with gap widths of 1.0 mm, 0.5 mm and 0.25 mm. Compared to conventional perforated sheets, slotted tubes offer much greater pressure stability and a larger screening area.

Technical Parameter

Material:	in contact with the product: 1.4301 (304) / 1.4307 (304L), 1.4404 (316L) not in contact with the product: 1.4301 (304) / 1.4307 (304L) strainer: 1.4435 (316L)
Surface:	inside: $Ra \leq 0.8 \mu m$ (strainer and welding seam higher) outside: electro polished
Sealing:	clamp seal ring DIN 32676: (other materials on request)
Compressive strength:	nominal pressure: PN10
Connections:	standard: welding ends DIN EN 10357 alternative: male ends DIN 11851 alternative: clamp ends DIN 32676 (other variants on request)

Overview Kv-Value

The Kv-value describes the rate of flow in m^3/h of water up to $15^\circ C$ with a pressure loss of 1 bar ($=\Delta p$)

Kv-Value

Inline Sight Glasses and Accessories

The AWH inline sight glass presented in this catalogue offers a range of advantages over conventional products:

1. Its design prevents incorrect assembly thanks to the following:
 - stud bolt with stop collar, which also increases resistance to fracture
 - predefined pre-compression of the seal ring on the glass cylinder
 - use of standard components from the catalogue
 - self-locking nuts
2. Optimum visibility thanks to easy-to-clean safety screen made of shock-resistant plastic. Does not restrict visibility like stamped sheet metal.
3. Available in nominal diameters of DN10 - DN150.
4. The pressure specifications for inline sight glasses can be found in the table on glass cylinders for inline sight glasses.

Technical Parameter

Material:	in contact with the product: 1.4301 (304) / 1.4307 (304L), 1.4404 (316L) not in contact with the product: 1.4301 (304) / 1.4307 (304L) Glass cylinder: Borosilicat
Surface:	inside: $Ra \leq 0.8 \mu m$
Compressive strength:	nominal pressure: PN10 up to DN65, larger dimensions see table glass cylinders for inline sight glasses
Connections:	standard: welding ends DIN EN 10357 alternative: male ends DIN 11851 alternative: liner ends DIN 11851 (other variants on request)

Technical Parameter Polycarbonat (safety screen for inline sight glass)

Color:	transparent (translucency > 86%)
Material:	thermoplastic polymer
Operating temperature:	up to about 120 °C, for short duration during cleaning
Typical field of use:	highly fracture-resistant and shock-resistant, excellent translucency resistant to mineral acids, many organic acids, oxidation and reducing agents, neutral and acidic saline solutions, many different fats, waxes and oils
Limitations of use:	not very scratch-resistant, not intended for parts that come into contact with the product not resistant to aqueous or alcoholic alkalis, ammonia gas or solutions and amines of these heavy swelling with benzene, chlorobenzene, tetralin, acetone, ethyl acetate, acetonitrile and carbon tetrachloride
Recommended cleaning agent:	company WIGOL: 30 20 04, 30 20 00, 1085, 60 80 25; company WEBCO: „alcip“

Installation Instructions

During assembly, ensure that a suitable gasket is installed on both sides of the glass cylinder. The surfaces of the gaskets must be free of impurities and undamaged. Nuts must be tightened crossed and in several increments.

Sight Glasses and Accessories

1. In the standard sight glass, a pane of tempered glass is screwed in to a male with a welded end using a seal ring and a grooved nut. The sight glass is made of Borosilicate glass, which offers excellent strength and thermal stability. The maximum temperature is 280 °C (acc. to DIN 7080). The change in temperature from 230 °C to 20 °C must take at least 1 minute.
2. The sight glass with a wiper blade is used for liquids with large amounts of solid particles that can leave deposits on the Borosilicate pane.
3. The light for the sight glass comes in two different versions:
 - For the sight glass unit DIN welding ends. With this version, the medium is transilluminated.
 - For the sight glass DIN welding. In this case, the medium is illuminated.

When properly installed, a protective rating of IP65 in compliance with EN 60529 / DIN VDE 0470 Part 1 (dust tight and protected against low pressure jets of water) is achieved.

The lights are not suited for use in explosion-prone operating environments.

Technical Parameter

Material:	in contact with the product: 1.4301 (304) / 1.4307 (304L), 1.4404 (316L) not in contact with the product: 1.4301 (304) / 1.4307 (304L) Sight glass: Borosilicate
Surface:	inside: $Ra \leq 0.8 \mu m$ outside: fine turned
Anschlüsse:	standard: welding ends DIN EN 10357

Installation Instructions

When welding the male, ensure that the unit is not deformed during the welding process. This must be done by trained and authorised personnel.

Additional Installation Instructions for the Sight Glass with Light

- The light must be installed by trained, authorised personnel with the voltage specified on the identification plate.
- Sight glass lights have a dedicated purpose and are designed exclusively for the intended application.
- Inline sight glasses with a built-in pushbutton are designed for pushbutton mode only.
- Inline sight glasses intended for continuous operation must be operated using an external switch. This must always be specified in the order.
- The lights are not suitable for explosion-prone operating environments.

Attention: Continuous operation is only permitted for some lights. Please be aware of this when ordering and always specify this in your order!

Additional Installation Instructions for the Sight Glass with Wiper Blade

- The wiper blade may only be used in a temperature range of -40 °C to 140 °C.
- The maximum nominal pressure of the unit is 6 bar.
- The wiper screw must be regularly checked for tightness and re-tightened as necessary.
